FARMSEA 10

Farmura Farmsea 10 is made up of a formulation of Farmura Liquid and seaweed resulting in a feed that combines the complementary benefits of both the Farmura programme and seaweed for a maximum impact.

Farmura Seaweed which is added to give a rate of 10 ltrs/ha is important as an effective growth stimulator, encouraging strong rooting and aiding plant health during periods of stress caused by drought, frost or heavy use. At the level supplied there is no need to buy additional Seaweed where Farmsea 10 is used.

- ✓ A balanced soil conditioner
- ✓ No need to buy additional Seaweed
- ✓ Increases nutrient availability to the plant
- ✓ Growth stimulator
- ✓ Encourages strong rooting
- ✓ Aids plant health during periods of drought, frost or heavy use
- ✓ Increases beneficial bacteria within the soil
- ✓ Farmura + Seaweed combination assists with sward density

WHERE TO USE	APPLICATION RATE	FEATURES	FOR BEST RESULTS
Pre-seeding Re-seeding Fine Turf Land reclamation Ecologically sensitive areas Turf laying General maintenance	Pack sizes: 25 ltrs, 210 ltrs, 1000 ltr IBC's Can be used monthly throughout the year depending on weather conditions. Apply 100 ltrs per hectare Apply 5 ltrs/500 sqm Water ratio: 1:5	Formulation of Organic Liquid and seaweed to maximise performance Contains 70 analysed nutrients Full application of seaweed at 10 ltrs/ha meaning the purchase of additional Seaweed is not necessary. Low nitrogen 0.6% 70:30 soil leaf uptake	Use when the ground temperature is above 7°C Avoid spraying in the heat of the day In dry conditions water after application
