

Horticultural Turf Treatment for Managed Amenity Turf – Golf Courses Only

- Contact action – interferes with photosynthesis
- 1 application per year (15 kg/ha maximum rate)
- Use between May and August (when moss is actively growing)
- Watering can application (10,000 l water per ha)
- Orange indicator dye
- Treatment with Mogeton® turns moss brown (cf treatment with ferric sulphate which turns moss black)

Use on Managed Amenity Turf For moss removal

Golf Courses Only

Mogeton contains an orange indicator dye so that the operator can see which areas have been treated – this orange dye fades shortly after application.
