

Banner Maxx

Fast broad-spectrum disease control

Banner Maxx is a broad spectrum foliar fungicide with systemic properties for the control of Fusarium Patch, Dollar Spot, Anthracnose and Brown Patch on managed amenity turf and amenity grassland.

It delivers preventative, curative and early eradicator action when used at the appropriate time, targeting fungal pathogens inside the plant – effectively preventing disease development by stopping production of energy inside fungal cell membranes. As a result, damaging infection is prevented at the earliest opportunity, minimising the visual effects and impact of disease attack.

Propiconazole is rapidly absorbed by the assimilating parts of the plant, mostly within one hour of treatment, and is transported upwards in the xylem. This systemic translocation contributes to good distribution of the active ingredient within the plant tissue. Optimal results will be achieved when Banner Maxx is applied when the disease is still in the early stages of development. It is recommended that application begins when conditions are favourable for disease infection and at the very first signs of disease symptoms.

Banner Maxx includes Syngenta's Maxx formulation technology, specifically designed to be gentle on delicate turf grass species, yet gets to work fast and ensures the very best results. Virtually all the active ingredient is rapidly absorbed by the grass plants within an hour of application, ensuring maximum disease protection and minimising the risk of environmental loss.

Application rates

| | Amount Banner Maxx required | Water volume | Area treated |
|-------------------------|-----------------------------|------------------|--------------|
| Tractor Mounted Sprayer | 3 litres | Min 400 litres | 1 ha |
| | | Max 1,000 litres | |
| Spot treatment | 30ml | 4-10 litres | 1 ha |

Timing

Apply in a preventative spray programme of up to 4 sprays per season, starting when conditions become favourable for disease development.

Apply 3 litres of Banner Maxx per hectare at a minimum interval of 14 days.

Banner Maxx Benefits

- Excellent control of Fusarium Patch, Anthracnose, Dollar Spot and Brown Patch
 - Protective, curative and early eradicator activity
 - Rapid action, gets to work quickly and protects turf as it grows
 - Complements Heritage Maxx and Medallion TL as part of a programmed approach to turf disease control
 - Approved for use through boom and knapsack sprayers
 - Rainfast in one hour
- Recommended use: greens, tees, fairways, sports fields, amenity turf

Banner Maxx

Contains 156g/litre propiconazole
MAPP No. 13167.
