

*Protecting aircraft by creating an unfavourable habitat for birds.*

In aviation one of the greatest dangers is posed by birds striking planes.

The E14 Airfield mixture is formulated to be sown around airfields and maintained as part of a 'Long Grass Management' programme, which involves the grass being maintained to a height of 150mm.

The grasses included in the mixture are ones which have a stiff, upright growth habit that make it difficult for birds to land.

- + Creates an unfavourable habitat for birds
- + Stiff, upright growth habit deters birds from landing
- + Very persistent and tolerant of harsh conditions
- + Designed to be used as part of a 'Long Grass Management' programme
- + Maintain to a height of 150mm for optimum results

#### Areas of use:

- + Airfields

70%	Tall Fescue
15%	Cocksfoot
10%	Timothy
5%	Crested Dogstail

Pack Size	20kg
Sowing rate	20-30g/m <sup>2</sup>
Cutting Height	Maintain to 150mm
