

Keep your grass green, even when it is in the dark.

A blend formulated to perform in areas that are subject to increased levels of shade. Shade is one of the main problems encountered in lawns. The mixture utilises *Barlennium* perennial ryegrass, a Barenbrug-bred variety, that performs well in shade conditions due to increased chlorophyll levels in leaves. It is also a slow-growing variety, which works well in lawn situations with other slow growing fescue grasses in the mixture. Despite being formulated to perform in shade, this mixture will produce an attractive turf – even if sown in areas of full sun.

- + Thrives in shade as well as areas of full sun
- + Creates an attractive turf
- + Tolerant of the dry conditions typically found under trees
- + Ideal for sowing under new orchards and tree plantations

Areas of use:

- + Any area of turf that is subject to frequent shade
- + Shaded lawns
- + Undersowing of orchards and tree plantations
- + Shaded golf course fairways

30%	Barlennium Perennial ryegrass
30%	Reverent Strong creeping red fescue
20%	Reggae Slender creeping red fescue
20%	Triana Hard fescue

Pack Size	5kg, 10kg, 20kg
Sowing rate	25-35g/m ²
Cutting Height	Down to 15mm
