**AICL**

# H<sub>2</sub>Pro<sup>®</sup> SaltSmart

H<sub>2</sub>Pro penetrant surfactant plus Calcium macro-polymer.

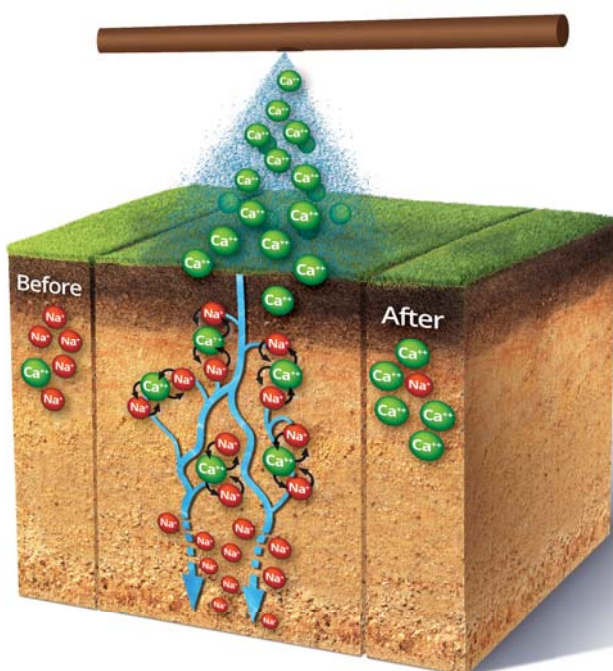

Designed to move water and exchange cations thus reducing impact of salt on turf. Allows water to penetrate, dissolve salts and flush salts below the rooting level or out into the drainage system.

## Key Points

Salt levels can build up in a sports turf rootzone for a number of reasons:

- Sea spray (links courses)
- Irrigation with reclaimed water
- Poor quality groundwater for irrigation
- High evaporation, low rainfall
- Low CEC sand-based rootzones that have limited buffering against salt influx

### Product Performance

Turf Response: Immediate

### Product characteristics

Type: Liquid  
Pack Size: 5 L  
Pack Outer: 4 x 5 L  
Pack Coverage: 833 - 2,500m<sup>2</sup>

### Application rate

Application rate: 20 - 60L/ha  
Water Volume: 800 - 1,000 L  
Application timings: Monthly

### Health and safety

A Material Safety Data sheet is available on request.

### Recommended period of use

January - December

### Areas of use

Fine turf, sportsfields, golf fairways, amenity turf, lawns.
