

A pleasant blue colour that reduces the penetration of sunlight, preventing the formation of algae and aquatic weeds.

- 1** Use 8-12Ltr of Prestige Super Blue Lake Colourant on 10,000 m² (1 ha) of water surface to obtain a colouring of 1-2m depth across the lake or pond.
- 2** Application rate is variable to achieve the desired shade.
- 3** Empty the bottle from several locations on the shore. The natural movement of water will diffuse the product over the entire water surface.
- 4** Do not use in streams or ponds containing water for drinking purposes.
- 5** The dye is very concentrated, take care not to spill on hard surfaces or clothing.
