

An organosilicon penetrant specifically designed for tank mixing. It ensures the maximum penetration of the chemicals down in to the rootzone especially where a thatch layer is present.

- 1** Application should be 25ml in 25Ltr water or 100-200ml per 200Ltr of spray solution.
- 2** Use at the 200ml per 200Ltr spray solution if any thatch is present.
- 3** Do not use with products that are formulated to be leaf absorbed.
- 4** Ideal to be tank mixed with wide selection of products, check with your Collier Turf Care Rep.
- 5** Clean spray tank after application with an approver cleaner such as Prestige Super Tank Cleaner.
