

- 1** A winter soil conditioner that should be applied as required anytime from autumn through to spring.
- 2** Application should be 30g per m<sup>2</sup>.
- 3** The blend of slow release nitrogen sources in the product will give 7.5kg/ Ha of nitrogen per application.
- 4** Best applied to moist soil immediately prior to very heavy rain. If not possible then it must be irrigated into the rootzone immediately afterward with a minimum of 10mm of irrigation.
- 5** Aerate the turf prior to application to help more product get into the soil.
- 6** Can be harmful to aquatic life, do not allow product to enter watercourses.
- 7** This product contains natural ingredients and a variable granulation size that can be irregular, which can cause inconsistent spread. As a guide the spreader setting for the Accupro is...  
Cone setting 6  
single pass O 1/2  
OR  
Double pass L 1/2
