E16-C - Embankment & Ground Cover +

Added clover to steep embankments

- Our E16 mixture with the added benefit of small leaf white clover
- Designed to give rapid, yet long lasting ground cover on steep embankments and areas of unstable or loose soil
- Utilises deep-rooted and creeping species to stabilise and bind soil
- White clover to provides a supply of nutrients for the neighbouring grass plants

Our E16-C mixture is enhanced with small leaved white clover to provide a supply of nutrients for the neighbouring grass plants. The mixture will give rapid germination due to the inclusion of annual ryegrass which will act as a 'nurse crop', giving protection to the other species whilst they establish. The mixture includes a combination of deep-rooted, creeping, drought tolerant and hardwearing species to create an incredibly hardy mixture.

- White clover fixes nitrogen, making this the best choice for very thin, impoverished soils
- Creeping and deep-rooted grass species to stabilise soil
- Rapid germination from 'nurse crop' annual ryegrass
- Very tolerant of harsh conditions
- Available without white clover - see E16 Embankment and Ground Cover

AREAS OF USE

- Steep banks
- Thin impoverished soil
- Areas of loose and unstable soil
- Road verges

* A higher sowing rate is recommended when sowing on steep banks.

Specifications

Sowing rate	25 - 50g/m ² *
Height of cut	Down to 50mm
Pack size	20kg

Composition

- 25% Perennial Ryegrass Dwarf
- 20% Strong Creeping Red Fescue
- 12.5% Tall Fescue
- 12.5% Slender Creeping Red Fescue
- 10% Hard Fescue
- 10% Smooth Stalked Meadow Grass
- 5% Browntop Bent
- 5% White Clover Small Leaved
