

Use when necessary to reduce foaming in the spray tank, this should be done when the spray tank is at least half full and before foam overflows the tank chamber.

- 1** Use as required however, one good squirt per 100Ltr of spray solution is usually successful.
- 2** Add when the spray tank is at least half full and before foam overflows the tank chamber.
- 3** Clean spray tank after application with an approver cleaner such as Prestige Super Tank Cleaner.
