

This unique granular fertiliser and bio-stimulant increases seed growth and establishment. It has both mycorrhizae and humic acid added to aid turf recovery following scarification and turf wear. Best applied after spiking or verti-cutting, it can also be mixed into divot mixes.

- 1** Application should be 40g per m².
- 2** Best applied after spiking and worked into the soil.
- 3** If no rainfall within 48 hours then product will benefit from being irrigated in.
- 4** Suggested spreader settings:
Accupro = Cone 6, Gate opening 0 applied in ONE direction gives a total of 20g/m².
Ev-N-Spred = Gate opening 16 applied in ONE direction gives a total of 20g/m².
- 5** Apply when the grass is growing (6°C or above).
- 6** Mix into divot mix at 15g/m³ to aid seed establishment.
- 7** Apply at 50g/m² to bare soil prior to turfing.
