

TXE 606 & 353

- Increased functionality
- Greater control
- Cleaner lines
- Easier filling and cleaning
- Improved layout for simpler maintenance

**SETTING A NEW STANDARD
FOR LINE MARKERS**

THE NEW

TXE 606 & 353

Enhanced performance and

For many years, TXE line marking machines have been recognised as the industry standard. Well, the standard just got higher thanks to a range of new, customer-driven, design features incorporated in the upgraded machines.

New design features:

Improved chassis arrangement

Created from a double layer of steel tube for extra strength, the new chassis arrangement has enabled the removal of the front axle. This means that the spray nozzle and marking discs are perfectly aligned to the wheel axis to provide greater control and cleaner lines. The new arrangement also makes marking corners and curves even easier and more accurate.

Bigger tank lid and filter basket

The opening to the tank has doubled in size to 8 inches, making filling the tank easier and cleaner, with less chance of drips or wasting product and money in overspills.

Equipment compartment

The compartment for the battery, pump, filter and electrical wiring has been completely re-designed to provide total enclosure but still maintaining easy access to all components to simplify routine maintenance.

In-line eyelet

A simple addition, but one that enables any user to create accurate centre circles with ease.

Anti-flip feature

We've redesigned and remoulded the tank to incorporate two protruding nodules which effectively prevent the tank from flipping beyond the handlebars during emptying and cleaning.

Marking discs kit is an optional extra.

even easier operation

The new machines offer even greater functionality and improved performance combined with simplified maintenance and easier cleaning.

TXEs are exceptionally robust, lightweight machines with the capability to mark up to three football pitches on a single tank and are the ideal choice where multiple pitches have to be marked out.

All TXE machines offer the following benefits:

- **Exceptionally easy to operate.**
All controls mounted on the handlebars
- **Reinforced side frames for added strength**
- **Will mark line widths from 1" (2.5 cm) to 5" (13 cm)**
- **Fold-over handlebars for easy transport and storage**
- **Easy to clean and maintain**

TXE models

TXE 606

Equipped with an 18 amp/h battery that provides up to 5 hours use (enough for approx. 15 pitches) on a single charge.

TXE 353

Equipped with a 7 amp/h battery that provides up to 2 hours use on a single battery charge (enough for approx. 6 pitches).

TXE 606 & 353 Pro

Both the TXE 606 & 353 are also supplied as Pro models, complete with a factory fitted 2.5 litre flush tank with a 'back to tank' system. The flush tank is operated by a single lever which switches between clean water and paint to flush the filter, pump, spray lines, pipes and spray head without having to empty the main tank between jobs or site. It's the ideal way to prevent build-up of marking liquid residues and help prolong the working life of the machine.

The 'back to tank' system enables the pressure at the spray nozzle to be adjusted to suit the marking conditions or surface. The system also has the added benefit of agitating the liquid in the main tank when in use.

TXE ACCESSORIES

The full range of TXE accessories can be used with the new TXE 606 and 353 machines.

Marking discs

Available as an optional extra, the marking discs help ensure the sharpest possible lines. Easy to fit and fully adjustable for different line widths.

Athletics attachment

The ideal way to accurately mark out athletics tracks. Produces three parallel lines – two lanes – in just one pass. Takes just five minutes to fit.

Spray boom

Makes the most of your machine. Converts the TXE into a very effective sprayer for liquid fertilisers or other turf treatments. Install in minutes. Fine spray through three nozzles.

TXE Pro-Kit

Contains flush tank and back-to-tank system for retro-fitting to standard machines

Keep your TXE in top condition

SupaFlush

Non-ionic surfactant solution that effectively cleans marking machines and prevents the build-up of residues in pumps, tanks and spray nozzles. Acts as a barrier on inner surfaces of pipes, pumps and nozzles.

SupaWipes

Heavy duty wipes designed to remove wet and semi-cured paints, sealants and adhesives. Ideal for cleaning machines and hands.
