

# Super Sticker with Anti Drift

**A penetrative surfactant designed to improve the retention and uptake of turf management products. It ensures maximum effect at lower water rates and makes the chemicals rainfast too.**

- Designed for optimal leaf uptake of turf care products.
- Ensures rapid and efficient foliar product absorption.
- Reduces turf management product wash off.
- Greater coverage of turf management products.
- Enhances the action of management products by improving uptake.

## Why Use Prestige Super Sticker with Anti Drift:

Super Sticker increases turf management product's ability to stick to the leaf surface. This decreases the amount of product that washes off the surface during irrigation or rain. Super Sticker can also reduce turf management product's evaporation rate. Super Sticker does not form a physical barrier on the leaf to block pores but instead forms many thin layers with air spaces between them to allow for efficient gaseous exchange.

The Anti Drift agent is based on surfactants and oils specifically designed to reduce the number of fine spray particles created during spray applications. Smaller particles are more susceptible to moving in the wind, so the elimination of these particles results in increased spray accuracy by significantly reducing spray drift without negatively impacting spray volume.

## Application Rate:

Add half the required volume of water and start agitation, add the required quantity of Super Sticker then add the remaining water whilst agitating.

Apply as a medium to fine spray.

Water Volume	Qty of Prestige Super Sticker with Anti Drift
25 Litres	35 ml
200 Litres	200 - 300 ml
