

# Hilite

The responsible way to spray  
with Total Droplet Control

## Why should I use Hilite?

### Versatile, safe and effective solution to total weed control

- technically advanced Total Droplet Control (TDC) glyphosate formulation

### Safer for the environment

- biodegrades into naturally occurring compounds in the soil

### Safer for operators, bystanders, wildlife and pets

- non-irritant and no breathable droplets

### Rain-fast within 30-60 minutes of application

- oil-emulsion formulation is quickly absorbed by the leaves

### Spray closer to obstacles

- targeted applications, virtually no spray drift, droplet bounce or run-off

### Accurate application means less wastage

- precise, uniform droplets

## Where can I use Hilite?

Hilite effectively controls broad-leaved weeds, annual and perennial grasses in amenity and industrial areas, including parks, highways, paved areas and factory sites.

Hilite is also effective for clearing vegetation prior to planting, around tree bases, ornamental species, shrubs and roses, as well as in forestry situations.

Industrial sites

Landscaped areas

Hard surfaces

Tree bases

Parks

## How does Hilite work?

Hilite is a technically advanced oil-emulsion TDC formulation containing glyphosate. Once applied, Hilite is easily absorbed by the leaves. The glyphosate then travels throughout the plant to the root system, ensuring effective control.

The oil-emulsion quickly cuts through the weed's protective cuticle. This allows the glyphosate to penetrate into the weed, delivering excellent control, whilst reducing the environmental impact.

## How do I apply Hilite?

Hilite is a low volume herbicide, applied using our unique range of Nomix TDC applicators. Simply shake the ready to use pack, connect it to the applicator, calibrate and you are ready to start spraying.

Established annuals, deep-rooted perennials and broad-leaved weeds	<b>10 litres/ha</b>
Light vegetation and small annual weeds	<b>7.5 litres/ha</b>
