

## Prestige Bunker Sand Liner 250

The Prestige Bunker Sand Liner has been created using proven technology.

### Prestige Bunker Sand Liner

The Prestige Bunker Sand Liner is specifically engineered to be installed in bunkers to stop contamination from the soil beneath whilst improving drainage down to the installed drains.

- Designed for use in bunkers
- Prevents sand from being contaminated by the soil beneath the liner
- Improves drainage and aesthetics

**Pack Size:** 100 sq. m. (2 m x 50 m)

### Prestige Bunker Sand Liner Staples

Prestige Bunker Sand Liner staples are a high grade 6" steel tool used to hold the Bunker Sand Liner in place, even in the most demanding situations.

- Innovative
- Cost effective

**Pack Size:** 500

**Pack Coverage:** 67 - 133 sq. m, allowing 100 staples for join.

- Staple every 75 - 150 mm along seams
- 3 - 6 staples per sq. m

## Prestige Bunker Sand Liner Installation Guide

- 
- Ensure that adequate drainage is installed prior to putting down the Prestige Bunker Sand Liner.
  - Shape bunker floor and remove any debris which may be making the surface rough.
  - Install the liner keeping seams and joins to the minimum possible. Overlay the liner by 50 - 75 mm. Lay the liner lengthways, widthways or diagonally to suit. Staple every 75 - 150 mm along the liner.
  - The liner can be laid underneath the bunker edge turf, or it can be stapled at the top edge. In the case of the former, care should be taken when removing or folding back the turf to make reinstatement easier. The liner should be stapled under the turf. If stapling at the top edge, staple spacing should be no more than 75 - 150 mm apart.
  - Concentrate the staples along the joins, with 3 - 6 staples per square metre.
  - Spread sand over the liner and spray with water. Repeat 3 - 4 times to achieve full sand impregnation of the liner.

Collier Turf Care also offer a range of drainage materials and bunker sands. For more information please contact your local Technical representative or our office.
