

Liquid Iron

The ultimate solution for tackling the development of moss in turf.

Formulated with a powerful 7% Fe liquid ferric sulphate, this product is specifically designed to target and help eliminate moss, while enhancing the colour and health of your grass.

The application of the Liquid Iron will achieve an immediate response and create a positive transformation as the moss is blackened immediately with just 40 litres per hectare of Liquid Iron.

Not only does it help eradicate moss, but Liquid Iron also improves the colour of the grass, giving it a vibrant appearance.

With its liquid formulation, Liquid Iron ensures quick and effortless mixing, saving you valuable time and effort. There is no need to measure large amounts making it ideal to use for smaller application areas, ensuring accurate dosing for every square metre.

For those areas in need of additional nutrition, Liquid Iron can be safely tank-mixed with liquid nutrition (NPK) to provide a comprehensive treatment solution.

Key points

Instant blackening of moss (40L/ha)

Improves grass colour (20-40L/ha)

Liquid formulation, quick & easy to mix

Easy to measure for smaller areas

Can be tank-mixed with nutrition (NPK) if required

20 litre pack size

Application rate

20 - 40L/ha in 300 - 600L of water
