

## Barenbrug Grass seed

Barenbrug Grass seed is designed for you

# SOS

### Overseeding mix for Football & Rugby, Racing & Racecourses

- Purpose-bred varieties, designed for emergency repair during winter months
- Fast germination, establishment and growth
- Overseeding and patching blend of ryegrass species that germinate and grow vigorously at very low temperatures

#### MIXTURE:

50% perennial ryegrass  
50% annual ryegrass

#### USAGE:

Designed for emergency mid-season turf repair, aiming for the fastest possible germination, establishment and growth in cool temperatures.

#### FEATURES & BENEFITS

The saviour of the winter season, this specially formulated product contains varieties that germinate and establish quickly to resurrect high traffic areas on any pitch or racecourse.

 BARENBRUG

## Barenbrug Grass seed

Barenbrug Grass seed is designed for you

*Barterra* is an annual ryegrass that will germinate as low as 3.5°, quicker and at lower temperatures than perennial ryegrass, including tetraploid varieties.

*Barbasten* and *Barcristalla* provide a longer-term solution with good performance characteristics. *Barbasten* is a particularly wear tolerant variety (ranked #3 on Table S1 Turfgrass Seed) and *Barcristalla* complements the blend well with a darker winter colour.

Barenbrug research shows the advantages of using a hard-wearing diploid perennial ryegrass, rather than a tetraploid alternative, as a partner to annual ryegrasses for winter grass seed mixtures.

In recent trials - overseeded in January at a soil temperature of 6.2°C - SOS was shown to establish and restore a sward faster than a perennial ryegrass, recovering from 20% to more than 60% within a month (see graph below).

### Specifications

Sowing rate	30-50g m <sup>2</sup>
Oversowing rate	20-40g m <sup>2</sup>
Sowing depth	4-8mm < thatch
Mowing height	down to 20mm

### Composition

50%	Barterra	Annual ryegrass
25%	Barbasten	Perennial ryegrass
25%	Barcristalla	Perennial ryegrass
