# E11 - Water Saver / Dry Soils

## Dry soils, prone to drought, can rejoice

- Designed for areas of extremely dry, thin and sandy soil that are prone to drought
- Also ideal for areas of normal soil conditions that are subject to restricted water usage

The availability of water for irrigation is likely to be an increasing issue in the future. The E11 mixture utilises the most drought tolerant grass species suitable for the UK climate - tall fescue. Tall fescue has an exceptionally deep root system, which means it can access water that is unavailable to other species. Ideal for urban areas where water usage may be unavailable or restricted.

- Developed for drought prone soils
- Ideal for areas where water usage is restricted
- Contains tall fescue, the most drought tolerant species for the UK climate
- Excellent wear tolerance once established

### AREAS OF USE

- Areas of thin, drought prone soil
- Areas where water usage is unavailable / restricted
- Public open spaces
- Urban areas
- Parks
- Mediterranean lawns

## Specifications

Sowing rate	25 - 35g/m <sup>2</sup>
Height of cut	Down to 15mm
Pack size	20kg

## Composition

50% Perennial Ryegrass

50% Tall Fescue
