

A specially formulated dew suppressant which lasts up to three weeks.

- 1** Application should be 1.2Ltr - 2Ltr per Ha in the water volume of 400 - 600Ltr water.
- 2** The longevity of Dew Clear is very dependent on the growth rate as it is removed with clippings.
- 3** Not suitable for tank mixing.
- 4** Only apply to a dry leaf.
- 5** Does not need to be irrigated in after application.
- 6** Ensure you irrigate prior to mowing or leave the boxes off until you can irrigate or there is rainfall. After irrigation/rainfall the material will be re-distributed amongst the grass blades giving a more prolonged effect.
