

A registered adjuvant designed to be added to fungicides and herbicides to assist in the recovery of the grass.

- 1** A registered adjuvant that is fully tank mixable with Turf Fungicides and Selective Herbicides.
- 2** Application should be 10Ltr per Ha in the water volume of the product it is being mixed with or if applied on its own, in 300 - 600Ltr water.
- 3** Clean spray equipment immediately after application with an approved spray tank cleaner such as Prestige Super Tank Cleaner.
- 4** A green up will be seen, this is mainly from the complex irons.
- 5** The product can produce an amount of foam when in the spray tank. It is advisable to use Prestige Super De-Foamer to disperse the bubbles.
- 6** Fully compatible with Prestige Super Spray Dye, Prestige Super Sticker and Prestige Super pH Buffer.

Prestige Super Recovery (Adjife)

Super Recovery is registered adjuvant designed to be added to fungicides and herbicides to assist in the recovery of the grass

The tank mixing of turf maintenance products is a common practice. Benefits include ease of use, time and cost savings and enhanced product performance.

Most iron products will not tank mix with such active ingredients as they react badly due to the acidic ph. Many iron products also contain sulphates which can also cause a negative reaction.

This reaction can result in an insoluble precipitate sediment which forms in the spray tank. This can block the sprayer, nozzles and pipework, and may render the products ineffective. Another result of this sediment can be uneven spray applications.

Adjife is based upon Ferric Ammonia Citrate, this is a complex iron which is easily foliar absorbed by the plant, once in the plant the complexed iron is utilised quickly providing a rapid response.

In addition there is a blend of surfactants that are leaf stickers and penetrants to ensure all components within the tank mix have the greatest contact time available. This increases the uptake within the plant.

Adjife	Water Volume	Area	Use
10 Litres	300 - 600 litres	1 Ha	Stand alone product
10 Litres	300 - 600 litres Always follow the fungicide or herbicide product labels for correct water rates	1 Ha	Tank mixable with fungicides and herbicides

Adjife is fully compatible with selective herbicides and fungicides. This product can be used as a stand alone product, or within a tank mix.

Tank Mix recommendations:

- Add half the required water volume into the spray tank.
- Add the selective herbicide / fungicide and agitate.
- Add the Adjife and add the remainder of water.
- It is recommended Prestige Super Tank Cleaner be used after spraying application is complete.
- Always follow label requirements for the herbicide or fungicide.
- Use the highest water volume (from pesticide label) when tank mixing.

Key Benefits of Adjife

- Fully tank mixable with selective herbicides and fungicides.
- Formulated to eliminate any tank mixing issues like sedimentation.
- Iron provides a visual green up to the turf grass usually within 24 hours.
- Green up masks the blackening effect of the weeds from the selective herbicide.
- Surfactant contains a sticker and spreader maximising the herbicide or fungicide efficacy.
- Includes a wide range of trace Elements and Amino-acids to aid plant recovery.
- Improves the mobility of nutrient products within the tank mix, thus improving the recovery of the sward.
- Improves rain fastness of the tank mix.
