

Melstar s

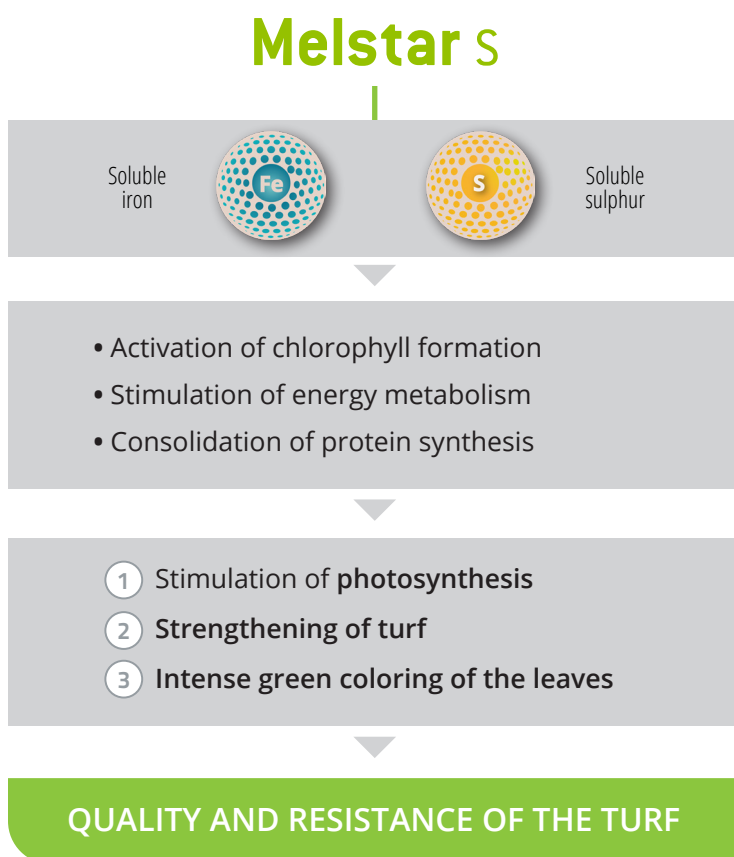

Ultra soluble iron sulfate

Iron is essential for the formation of chlorophyll, the pigment that allows photosynthesis. Photosynthesis ensures the production of energy necessary to the growth and vitality of the turf.

Iron is present in abundance in the soil, but phenomena can disturb its assimilation by the plant, such as:

- oxidizing conditions for roots (especially in sandy soils)
- a too high soil pH
- compacted soil or damaged roots
- antagonism with other minerals like phosphorus, zinc, copper...

Melstar S is a fertilizer rich in soluble iron that ensures perfect plant nutrition and supports active photosynthesis, for healthy and intense green turfs.

Features

Analytical values

Water soluble sulphur (SO ₃)	27.8%
Iron (Fe)	19.5%

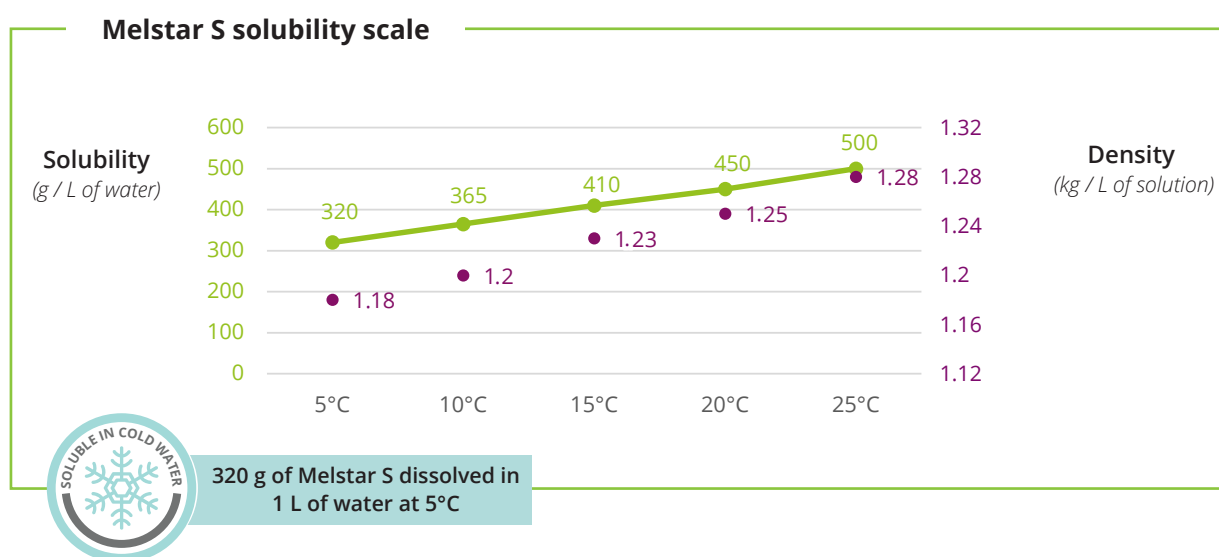

EU Fertilizer: PFC-1-C.II.a - Micronutrient salt fertiliser - iron sulphate

Technical data

Melstar S has an exceptional quality of solubilization in water, even at low temperatures, which makes it a practical and effective solution even in cold periods.

Packaging

25 kg bag
40 bags per pallet (1,000 kg)

Recommendations

Melstar S can be used all year round and is particularly recommended in the following situations:

- Soil conditions leading to iron blockage (pH >7, compacted, asphyxiated, sandy soils)
- Low sunshine (Autumn - Winter period)
- Frequent mowing
- Thatch build-up

For greens	5 kg/ha every 3 to 4 weeks
For fairways and sport pitches	10 to 15 kg/ha every 3 to 4 weeks

Precautions: In case of contact with slabs, concrete, clothing, etc., brush immediately to prevent staining.

Melstar S effectively accompanies the action of the organo-mineral fertilizer range **Marathon** and **Melgreen** foliar biosolutions.
