

SEATURF SUPERCONCENTRATE

A concentrated seaweed extract for use on sports and amenity turf, stimulating the soil biomass and root development, releasing locked up soil nutrients and improving drought and disease resistance.

DIRECTIONS FOR USE

Apply at the rate of 10 l/ha (7 pints / acre) at 6-8 week intervals in spring and summer.

Apply as a MEDIUM or COARSE spray (BCPC definition) using a hand-held, pedestrian controlled or vehicle mounted sprayer fitted with 80° or 110° flat fan or deflector (anvil) type nozzles.

SITUATION	FREQUENCY	AREA					
		100 m ²	500m ²	ha	120 sq yds	600 sq yds	acre
As a maintenance spray	6-8 week intervals	100 ml	0.5ltr	10 ltr	3½ fl oz	18 fl oz	7 pints
WATER	-	3-9 ltr	15-45 ltr	300-900 ltr	5-16 pints	3-10 gal	25-80 gal

MIXING INSTRUCTIONS

Put into the spray tank half of the water required. Measure the correct amount of concentrate and add to the water in the spray tank. Rinse out the measure and add the rinsings to the spray tank. Make up to the required volume with more water. Secure the cover or lid of the spray tank and agitate thoroughly. When spraying has been completed rinse out the equipment using clean water.

NOTE: SEATURF SUPERCONCENTRATE is compatible with wetting agents such as Organiflo for enhanced penetration, particularly in thatch ridden turf. Regular use of Seaturf SuperConcentrate with wetting agents in a turf maintenance programme will reduce thatch, improved aeration and water penetration.
AGITATE CONTENTS BEFORE USE. Store out of direct sunlight, between 0 and 30°C.
