

SEATURF IRON EXTRA

A natural liquid seaweed extract with added iron and nitrogen to stimulate the soil biomass and root development, release locked up soil nutrients and improve drought and disease resistance in fine turf and ornamental lawns. SEATURF IRON EXTRA will produce a rapid long lasting 'green up' of sports turf without overstimulating growth, making it ideal for enhancing sward appearance prior to sports events.

DIRECTIONS FOR USE

Apply at the rate of 40 l/ha (3½ gal/acre) 3 to 4 days before sporting events or where moss and slime algae are a problem. Compacted and dry turf should be thoroughly irrigated and tined prior to application. As part of a regular spray programme use 15 l/ha (10½ pints/acre).

Apply as a MEDIUM or COARSE spray (BCPC definition) using a hand-held, pedestrian controlled or vehicle mounted sprayer fitted with 80° or 110° flat fan or deflector (anvil) type nozzles. Use the higher water volumes when applying the upper recommended product rates.

SITUATION	FREQUENCY	AREA					
		100 m ²	500m ²	ha	120 sq yds	600 sq yds	acre
3-4 days prior to sporting events OR where moss and slime algae are a problem	-	400ml	2ltr	40 ltr	14 fl oz	3½ pints	3½ gal
As a maintenance spray	6-8 week intervals	150 ml	750 ml	15 ltr	5 fl oz	25 fl oz	10½ pints
WATER	-	3-9 ltr	15-45 ltr	300-900 ltr	5-16 pints	3-10 gal	25-80 gal

MIXING INSTRUCTIONS

Put into the spray tank half of the water required. Measure the correct amount of concentrate and add to the water in the spray tank. Rinse out the measure and add the rinsings to the spray tank. Make up to the required volume with more water. Secure the cover or lid of the spray tank and agitate thoroughly. When spraying has been completed rinse out the equipment using clean water.

NOTE: SEATURF IRON EXTRA is compatible with wetting agents such as Organiflo for enhanced penetration, particularly in thatch ridden turf. Regular use of Seaturf SuperConcentrate with wetting agents in a turf maintenance programme will reduce thatch, improve aeration and water penetration. Although SEATURF IRON EXTRA will cause a rapid blackening of moss, an approved mosskiller should be applied where moss control is required.

Avoid spillage onto clothing or hard surfaces as staining may occur.

IRON FERTILISER SOLUTION

Iron (Fe) soluble in water 6% w/w
Total Nitrogen (N) 3% w/w

To be used only where there is a recognised need. Do not exceed the appropriate application rates. Agitate contents before use. Store out of direct sunlight, between 0 and 30 °C.
