Amino-Sorb® F

Directions for use

For use on sports and amenity turf e.g. golf greens, tees, fairways, bowling greens, cricket squares, tennis court and soccer pitches

Timing

Amino-Sorb® F is recommended for use during the growing season for those occasions when the turf has difficulty absorbing nutrients from the soil.

Apply mid-March-September at 2-4 week intervals when turf is likely to suffer or is suffering from stress conditions. A rain free period of at least 2 hours after application is recommended. Note: Increase the number of applications rather than the rate of use during periods of prolonged stress.

Application

Apply through conventional spraying equipment with fan jets fitted to produce a medium to fine spray quality. Half fill the spray tank with clean water, add the required amount of **Amino-Sorb® F** and mix thoroughly whilst adding the remainder of the water.

Area of use	Amino-Sorb® F	Water Volume	Area Treated
Golf & Bowling Greens	150-250 mls	15-25 litres	500m ²
Tees & Fairways	3-5 litres	300-500 litres	1ha
Sportsfields	3-5 litres	300-500 litres	1ha

Product compatibility

Amino-Sorb® F is tank mix compatible with most other products including liquid fertilizers and organics. If tank mixing for the first time apply the combination to a small area first to establish safety and desired effects. When applying with sulphur containing compounds reduce the rate of application to 1,5 l/ha.

Precautions

Keep out of reach of children.
